

100G of hybrid optical and electrical cables exported from Greece

Summary of Content

Greece exports a significant volume of optical and electrical cables, with key suppliers like Dimoulas Special Cables capable of providing high-quality hybrid cables for international markets.

Market Overview

Greece's export of optical and electrical cables, including hybrid types, has been substantial in recent years. In 2022, the total value of exports for insulated wires, cables, and optical fibre cables reached \$525 million, representing nearly 1% of Greece's total merchandise exports. This category includes cables made up of individually sheathed fibres, whether or not assembled with electric conductors, which covers hybrid optical and electrical cables. The market for optical fibre cables in Greece has grown dramatically, with exports increasing from 730 tons in 2018 to 1,920 tons in 2024, reflecting strong international demand and domestic production growth. This growth has been supported by both domestic manufacturing and imports, ensuring a steady supply for export purposes.

Key Export Destinations

Greece exports optical fibres and cables to several European countries. The main destinations include Bulgaria, Germany, Belgium, the United Kingdom, and Luxembourg, with Bulgaria and Germany being the fastest-growing markets between 2020 and 2021. These countries are likely to be primary targets for 100G hybrid cable exports.
