

16-port optical network splitter

Overview

A 1×16 PLC Splitter is a compact and reliable solution that splits one input fiber into 16 output fibers with minimal signal loss. It ensures consistent signal transmission across all output channels, offering excellent performance in passive optical networks. In contrast to fused fiber couplers, where light is. In the backbone of modern Fiber-to-the-Home (FTTH) networks, optical splitters serve as the unsung heroes that enable cost-efficient connectivity for millions of subscribers. By dividing a single optical signal from a central Optical Line Terminal (OLT) into multiple outputs for Optical Network. The HTB8063 16 Ports Fiber Optic Distribution Box combines splicing, splitting, storage, and termination into one compact unit. Designed for high-performance fiber optic networks, this splitter plays a critical role in modern applications like FTTH. High-performance 16-channel passive optical splitter featuring <1 ps RMS jitter and low insertion loss for precise signal distribution. By allowing a single optical.
