

220V distribution box for construction sites

Summary of Content

220V distribution boxes provide safe, reliable, and portable power distribution for construction sites, with options for single-phase or three-phase systems and integrated safety features.

Overview

A 220V distribution box is designed to manage and distribute electrical power safely on construction sites, temporary installations, or outdoor projects. These boxes ensure that multiple tools, lighting, and machinery can operate simultaneously without overloading circuits or creating safety hazards .

Key Features

- **Portability and Compact Design:** Many units are compact and lightweight, often with handles for easy transport, making them suitable for temporary setups or mobile work areas .
- **Safety Features:** Integrated leakage protection devices (GFCI), overload protection, and emergency stop buttons help prevent electrical accidents and protect both personnel and equipment .
- **Durable Construction:** Enclosures are typically made from sheet steel, thermoplastic, or fiberglass, often rated IP65 or higher for dust and water resistance, and impact-resistant (IK08–IK10) to withstand harsh site conditions .
