

86 Fiber Optic Panel Dual Port

Summary of Content

Dual-port 86-type fiber optic panels connect fiber cables via modular jacks or adapters installed in a wall-mounted 86mm faceplate, supporting organized, high-performance fiber terminations.

Panel Overview

An 86-type dual-port fiber optic panel is a wall-mounted faceplate designed to house two fiber optic connections in a compact 86mm form factor. Panels like the Panduit MiniCom CFPL86F2SAW or Kolorapus 86-type dual-port panels support LC, SC, or other MiniCom fiber modules, allowing both single-mode and multimode fiber connections. The dual-port design enables two independent fiber connections per panel, ideal for structured cabling in offices, data centers, or residential networks.

Connection Method

- Select Compatible Modules or Adapters
- Choose the appropriate fiber adapter or MiniCom module for your fiber type (LC, SC, or MPO).
- Ensure the module matches the panel's dual-port slots and supports the intended fiber standard (single-mode or multimode), .
- Install the Modules into the Panel
- Snap the fiber adapter or module into the dual-port faceplate. Most 86-type panels feature tool-free snap-in installation, allowing quick deployment .
- Verify that the module is fully seated and aligned with the port opening.
