

Afghan manufacturer s 24-core fiber optic cable

Summary of Content

24-core fiber optic cables are widely used for high-capacity telecommunications, and Afghanistan is actively expanding its national fiber optic network, though local manufacturing details are limited.

Cable Specifications

A 24-core fiber optic cable typically contains 24 individual optical fibers housed in a protective structure. Common features include:

- Loose tube construction for flexibility and protection of fibers
- Aramid yarn strength members for tensile strength
- LSZH (Low Smoke Zero Halogen) or polyethylene outer sheath for outdoor durability
- Single-mode or multi-mode fibers depending on network requirements
- High crush and tensile resistance, suitable for long-distance and high-voltage environments ADSS (All-Dielectric Self-Supporting) variants allow installation on power transmission lines without requiring electricity, making them ideal for overhead deployment across rivers, valleys, or lightning-prone areas .
