

# Albanian Fire-Resistant Cable Trays

## Summary of Content

For fire-resistant cable tray solutions in Albania, steel, epoxy-coated, and fiberglass trays with certified fire ratings such as E60/E90 or UL-classified systems are highly recommended.

### Key Options and Materials

- **Steel Cable Trays** Steel is widely recommended for fire alarm and critical power cables due to its high melting point and structural integrity under fire conditions. Galvanized or stainless steel trays can withstand temperatures up to approximately 1400°C, providing sufficient evacuation time and maintaining cable support during a fire. Solid-bottom trays with metal dividers are ideal for sensitive low-voltage cables, preventing electromagnetic interference and physical damage.
- **Epoxy-Coated Steel Trays (Benarx)** Benarx epoxy cable trays offer passive fire protection for critical power and signal cables. They consist of perforated steel plates coated with epoxy, designed to maintain integrity under fire and mechanical stress. Prefabricated U- or L-shaped panels allow easy installation, inspection, and maintenance, making them suitable for industrial and outdoor applications.
- **Fiberglass and Powder-Coated Aluminum Trays** Fire-rated trays made from fiberglass with intumescent coatings or powder-coated aluminum provide lightweight, corrosion-resistant options. These materials are non-toxic, resist UV radiation, moisture, and chemicals, and are suitable for both indoor and outdoor installations.

### Fire Ratings and Standards

- **E60/E90 Class:** Ensures electrical circuits remain functional for 60 or 90 minutes during a fire.
