

Apartment Distribution Box Standards

Overview

The IEC (International Electrotechnical Commission) and BS 7671 (British Standard for Electrical Installations) both provide essential requirements for electrical installations, including those for fuse boards like garage unit, consumer unit and distribution board. With an engineering size of 450 × 340 × 100 mm, a clean white powder-coated steel body, pre-installed DIN rails, reserved module openings, concealed wall installation, and batch production consistency, this product is designed to solve real problems in high-rise residential construction. It is not. A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge protective devices. However, the key to a safe and reliable system lies in proper installation. If it's done poorly, you risk short circuits, fire hazards, or system failure. A developer may need one centralized.
