What is an Apartment Distribution Box?

An apartment distribution box, also called a switchboard or fuse box, is the central hub of your apartment's electrical system. It distributes electricity from the main supply to individual circuits, protecting cables and devices from overloads and short circuits through circuit breakers and fuses. Modern boxes also include residual current devices (RCDs) for personal protection, surge protection, and sometimes smart home modules for monitoring and automation .

Types of Distribution Boxes

- Surface-mounted boxes: Installed on the wall surface, easy to access and maintain.
- Embedded boxes: Installed within a wall cavity, providing a cleaner look but requiring more planning for installation . All modern boxes are made of durable, heat-resistant plastic or metal, designed to withstand temperature variations and mechanical impacts .
