

Bahamas Fiber Optic Cable Project

Summary of Content

The Bahamas is expanding and strengthening its fiber optic network through multiple projects, including subsea cables and fiber-to-the-home deployments, enhancing connectivity, resilience, and broadband speeds across the islands.

Project Overview

Cable Bahamas, in partnership with companies like Global Nexus Limited (GNX) and Actavo, is implementing a series of fiber optic initiatives to improve internet connectivity across the Bahamas, particularly in the Family Islands. These projects include subsea fiber networks connecting islands such as Eleuthera and the Exuma cays, as well as fiber-to-the-home (FTTH) networks in New Providence and other areas. The goal is to provide high-speed, reliable, and resilient internet for both residential and commercial users.

Key Developments

- **Eleuthera Resilience Project:** A new subsea cable extends connectivity from Norman's Cay to Cape Eleuthera, creating a redundant network path to prevent outages if a single cable is damaged. This project emphasizes network resilience rather than expansion, ensuring continuous service for businesses, families, and essential services.
- **Exuma Cays Connectivity:** Cable Bahamas and GNX are deploying a world-class subsea fiber network across 34 Exuma cays, providing broadband to hundreds of residents. This infrastructure supports tourism, real estate, and local businesses, aligning with government initiatives for economic growth.
