

Bus connector assembly price

Summary of Content

Bus connector assembly prices vary widely, typically ranging from a few dollars for small ribbon or wire-to-wire connectors to over \$100 for industrial-grade or high-current bus bar assemblies.

Price Range Overview

- Small-scale or ribbon bus connectors: These are often used in electronics or GPIB applications and can cost \$2–\$20 per unit, depending on length, pin count, and manufacturer (Mouser Electronics) .
- Industrial bus connectors: High-current or power bus bar assemblies, such as 48 V connectors for data centers or switchgear, typically range from \$50–\$150 per assembly, influenced by current rating, material (copper, tin-plated copper, or CCA), and environmental protection (TE Connectivity, DigiKey) .
- Profibus or CAN bus connectors: Specialized communication bus connectors for industrial automation can cost \$10–\$50 per unit, depending on features like programming ports, angle orientation, and brand (Amazon, Alibaba) .
- Wholesale or OEM bulk orders: Purchasing directly from manufacturers in China or verified distributors can reduce unit costs significantly, sometimes below \$5 per connector for large quantities, with customization options available (Made-in-China) .

Factors Affecting Price

- Material: Copper offers high conductivity and durability, while copper-clad aluminum (CCA) is cheaper but slightly less efficient .
