

Cable tray bend bending machine

Summary of Content

Cable tray bending machines are specialized automated systems designed to bend metal sheets into precise cable tray profiles, improving efficiency, accuracy, and production output.

Overview

Cable tray bending machines are essential in the production of ladder, perforated, solid, or channel cable trays used in electrical installations. These machines are designed to handle metal sheets or coils, typically ranging from 0.6 mm to 3.0 mm in thickness, and bend them into the required shapes with high precision and repeatability .

Types and Features

1. CNC Cable Tray Bending Machines:

- Utilize computer numerical control (CNC) for automated bending operations.
- Allow precise control of bending angles, lengths, and batch quantities.
- Require minimal labor, often operated by a single worker .
- Offer high-speed production, typically 10–15 m/min depending on material and tray shape .
- Include intelligent control systems and PLC automation for consistent quality .

2. Automatic Cable Tray Bending Machines:

- Reduce manual labor by combining feeding, bending, palletizing, and discharging in one workflow .
