

Cable tray elbows large to small size parts

Overview

Cable tray fittings are used to change direction, transition, branch, or adapt cable trays within complex wiring routes. In practice, fittings and accessories should be selected by route condition, not by parts list. A straight run needs one type of. TraceParts is one of the world's leading providers of 3D digital content for Engineering. It provides access to hundreds of supplier catalogs and more than 100 Million CAD models and product datasheets. These fitting are including: elbow, horizontal cross, vertical inside riser, reducers, cover clip, joint connector, horizontal cable tray tee, horizo. A cable tray elbow is a rigid or semi-flexible fitting that changes the horizontal or vertical direction of a cable tray run—typically at 45° or 90° angles. Unlike bends made by cutting and welding on-site, elbows are factory-formed components designed to maintain structural integrity, support load.
