

Cable tray stretching dynamic block

Overview

AutoCAD & REVIT TIPS In the home tab on the ribbon, in the block panel, choose Create Block In the Block Definition dialog box, enter a name. If you want to indicate a dynamic block, enter a name like door-DYN. Specify a basepoint and select objects for the block. But I need to be able to adjust the ends of the members as needed for different fittings to connect. This block consists of an element that represents the vertical profile to which I have associated a linear parameter "stretch" called Lp to modify the length of profile and a second element which represents the bracket to which. I am creating a single autocad dynamic block cable trays and fitting; whose shape you can change; size or configuration; as required.
