

Cable tray with grid in the middle

Overview

A wire mesh tray is a metal structure made up of a series of bars or rods in a grid pattern. The Wire Mesh Tray is an excellent choice if you are considering exposed electrical installations, where the wiring can be seen at a glance, allowing you to create a modern and industrial design in any setup. Additionally, it helps prevent cables from overheating thanks to the wire mesh tray. They are available in widths of 100, 200, 300, 400, 500 and 600mm. They allow a. These trays offer a highly flexible, reliable, and cost-effective solution for cable management, whether in high-density data centers or in complex transportation hubs. They are typically made of metal, such as steel or aluminum, and are designed to provide a safe and efficient way to route and protect. The cable-friendly G-channel cable trays from LANZ are made of robust steel, with rounded shapes and with a halogen-free polyethylene coating in accordance with IEC 60754-1 / EN 50267-2-1 standards (RAL 7035).
