

Calculation of external wiring for distribution boxes

Overview

Calculate the required cubic inch capacity for junction boxes, switch boxes, and device boxes per NEC 314. Add conductor rows by AWG size and count, enter the number of devices, grounds, and cable clamps, then compare the total required volume against your box's listed. Fill a distribution box safely and correctly. Calculate proper wire gauge, voltage compliance, and ensure proper wire management. Box fill calculations are important for several reasons: What is box fill?

The total volume. The Box Fill Calculator is an essential electrical installation tool that determines the maximum number of conductors, devices, and fittings that can be safely installed in electrical boxes according to National Electrical Code (NEC) standards.
