

Configuration of surface-mounted electrical control box

Summary of Content

Configuring a surface-mounted electrical control box involves selecting the right enclosure, securely mounting it, and wiring devices safely according to electrical codes.

Choosing the Right Box

Select a box based on the wiring system and environment. For non-metallic sheathed cable, a durable PVC plastic box is suitable, offering corrosion resistance and electrical insulation. For rigid metal conduit systems, a metallic box is required to maintain grounding continuity . Consider the number of devices (switches, outlets, or keystone jacks) and the box size to ensure proper fit and accessibility .

Tools and Materials Needed

- Surface mount box (plastic or metal)
- Screwdriver (Phillips and flathead)
- Wire strippers and cutters
- Voltage tester
- Drill and appropriate screws or anchors
- Conduit and fittings if required
- Electrical devices (switches, outlets, keystone jacks)
