

Connecting the fiber optic cable connector to the router

Summary of Content

Fiber optic cables connect to your router via an Optical Network Terminal (ONT), which converts light signals into Ethernet for your router.

Step 1: Gather Necessary Equipment

You will need a fiber optic cable (usually SC/APC or SC/UPC), an Optical Network Terminal (ONT) provided by your ISP, a fiber-ready router with a WAN or SFP port, and a high-quality Ethernet cable (Cat6a or higher) to link the ONT to the router .

Step 2: Connect the Fiber Cable to the ONT

- Locate the fiber wall outlet where the ISP's fiber line enters your home.
- Remove protective dust caps from both the fiber cable and the ONT port.
- Handle the fiber connector by its plastic housing to avoid damage.
- Align the connector with the ONT port using the key or tab and push until it clicks securely .

Step 3: Connect the ONT to the Router

- Use an Ethernet cable to connect the ONT's LAN/Ethernet port to the router's WAN port.
- Ensure the router is powered off initially.
- Power on the ONT first and wait for its status lights to stabilize, indicating a successful connection to the ISP network.
