

Construction Site Safety Distribution Box Signage

Summary of Content

Distribution boxes on construction sites must be clearly marked with OSHA-compliant danger or electrical safety signs to prevent unauthorized access and alert workers to high-voltage hazards.

Key Signage Requirements

1. **Danger and Electrical Hazard Signs** Distribution boxes should be marked with “DANGER - HIGH VOLTAGE” or similar signage to indicate life-threatening electrical hazards. These signs use red, black, and white color schemes and are required in areas with exposed energized conductors, high-voltage equipment, or arc flash zones to comply with OSHA standards (29 CFR 1926.403) and ANSI Z535 guidelines . 2. **Restricted Access and Authorized Personnel Only Signs** should clearly indicate that only authorized personnel may access the distribution box. This prevents accidental contact by untrained workers or visitors and reduces liability . 3. **Panel Identification and Clearance** Each distribution box should have labels identifying the panel and its components, along with panelboard clearance signs reminding workers to keep the area clear for safe access during emergencies . 4. **PPE and Safety Notices** If working near distribution boxes requires personal protective equipment (PPE), such as insulated gloves or eye protection, notice signs should be posted nearby to remind workers of mandatory safety gear .

Placement and Visibility

- Signs must be clearly visible from the approach distance and legible under all lighting conditions .
