

Construction of Galvanized Cable Trays in Senegal

Summary of Content

Galvanized cable trays in Senegal are available in pre-galvanized, GI, and hot-dip galvanized types, with styles including ladder, perforated, and trunking trays for various industrial and commercial applications.

Main Types by Surface Treatment

- **Pre-Galvanized Cable Trays** These trays are made from steel that is galvanized before fabrication, ensuring a uniform zinc coating across the surface, including welds and corners. This provides excellent corrosion resistance and is suitable for industrial, commercial, and infrastructure projects in Senegal .
- **GI (Galvanized Iron) Cable Trays** GI trays are made from galvanized iron sheets, offering durability and rust protection. They are commonly used in environments where moderate corrosion resistance is sufficient .
- **HDG (Hot-Dip Galvanized) Cable Trays** Hot-dip galvanized trays are coated after fabrication by immersing the tray in molten zinc. This method provides superior corrosion resistance, making them ideal for harsh or outdoor environments, such as coastal areas or industrial plants .

Main Types by Tray Style

- **Ladder Type** Consists of two side rails connected by cross rungs. This design allows maximum airflow, preventing cable overheating, and is suitable for heavy-duty power and control cables .
