

Construction site portable socket distribution box

Summary of Content

A construction site portable socket distribution box is a mobile, self-contained unit that safely distributes electrical power to multiple devices on temporary or outdoor sites.

Key Features

Sockets and Voltage Options: These boxes typically include multiple outlets for different voltages and currents, such as 230V 16A sockets and 400V CEE sockets (16A or 32A), often with protective flaps to maintain IP44 or IP54 ratings for water and dust resistance . **Safety Devices:** Integrated Residual Current Devices (RCDs) or FI switches protect against ground faults, while circuit breakers (MCBs) safeguard against overloads and short circuits. High-quality units often use brand-certified components and lockable lids for added security . **Housing and Durability:** Portable boxes are made from robust materials like polycarbonate (PC) or technopolymer, offering fire resistance, corrosion protection, and impact resistance. Many units feature handles or stands for easy mobility and elevated placement to avoid water or mud contact . **Cable and Connection:** They come pre-wired with heavy-duty cables (e.g., 2.5 mm² for 16A sockets, 4 mm² for 32A sockets) and industrial CEE plugs, ensuring safe and reliable connections to the main power supply .

Applications

- **Construction Sites:** Powering handheld tools, temporary lighting, and small machinery.
