

Cost of Level 2 Distribution Box

Summary of Content

A Level 2 distribution box typically costs between \$10 and \$50 for standard units, with higher-end or certified models reaching \$150-\$1,800 including installation.

Price Range and Factors

The cost of a Level 2 distribution box depends on several factors, including material, amperage rating, number of circuits, and certifications. Basic plastic residential units can range from \$10 to \$25, while steel or aluminum boxes for industrial use may cost around \$40 or more. High-quality, certified brands like Schneider Electric, Siemens, or ABB can command higher prices due to reliability and safety features. For terminal or two-level DIN rail boxes, such as those handling 100-125A with 2 inputs and 12 outputs, prices on platforms like Amazon are typically \$20-\$50 depending on materials like brass conductors and flame-retardant PA nylon shells.

Installation and Total Cost

Installation costs vary based on complexity, labor rates, and whether the box is embedded or surface-mounted. Embedded boxes may add \$10-\$30 per unit to the total cost. For larger residential or commercial panel boxes, including breakers, wiring, and professional installation, total costs can range from \$450 to \$1,500 for standard 100-125A setups, and up to \$2,800-\$4,000 for premium 200A+ outdoor weatherproof panels with extensive wiring.

Additional Considerations

- Material: Aluminum alloy > Steel > Plastic in cost.
- Protection rating: Higher IP ratings (e.g., IP65) increase price.
