

Cost of Spanish Optical Cable Terminal Box

Summary of Content

The price of optical cable terminal boxes in Spain typically ranges from €20 to €200 per unit, depending on capacity, type, and features.

Overview of Pricing

Optical cable terminal boxes in Spain vary widely in price based on capacity, indoor/outdoor use, and design complexity. Small indoor boxes for 1–4 fibers, such as the Fiber Access Terminal Box ORM 1 or PTO One, generally cost around €20–€50 per unit, offering basic splicing and connector management for residential or small office installations. These boxes are compact, wall-mounted, and made of ABS material with IP30–IP40 protection. For larger or modular boxes designed for multi-dwelling units or industrial applications, prices increase significantly. Examples include the FTB Max or FTB Speed series, which can terminate up to 168 fibers and support splitters, patching, and splicing. These units are more robust, suitable for outdoor or high-density deployments, and typically range from €100–€200 per unit.

Factors Affecting Price

- **Capacity:** Boxes with higher fiber capacity or multiple splicing trays cost more.
- **Environment:** Outdoor-rated boxes with higher ingress protection (IP54 or above) are more expensive than indoor-only units.
- **Material and Build:** Polyamide or ABS-PC enclosures with UV resistance and impact protection increase cost.
