

Cost of metal cable trays in Saudi Arabia

Summary of Content

Metal cable trays in Saudi Arabia typically range from SAR 150 to SAR 400 per meter, depending on material, type, and load capacity.

Overview of Cable Tray Types and Materials

Metal cable trays are widely used for industrial, commercial, and infrastructure projects in Saudi Arabia. Common materials include hot-dip galvanized steel, stainless steel (304/316), aluminum, and painted or epoxy-coated steel. Tray types include ladder, perforated, and channel configurations, with ladder trays being preferred for heavy-duty power cables and long spans. FRP/GRP trays are also available for corrosive environments, though they are generally more expensive than standard metal trays.

Factors Affecting Cost

- **Material:** Stainless steel trays are more expensive than galvanized steel or aluminum due to corrosion resistance and durability.
- **Tray Type:** Ladder trays typically cost more than perforated or channel trays because of higher material usage and structural strength.
- **Load Capacity:** Trays rated for 150–400 kg/m will vary in price, with heavy-duty trays costing more.
- **Dimensions:** Widths range from 100mm to 900mm, and larger trays require more material, increasing cost.
- **Finish and Coating:** Hot-dip galvanization, epoxy, or powder coatings add to the price but improve longevity, especially in coastal or industrial areas.
