

Danger Warning for Distribution Box

Overview

A proper sticker should include a hazard pictogram (for example a lightning bolt), a signal word ("DANGER," "WARNING," or "CAUTION"), and a clear description of the risk (like "High Voltage," "Electrical Shock Hazard," "Disconnect Before Maintenance"). The National Fire Protection Association's (NFPA) 79 standard requires enclosures that do not clearly show that they contain electrical devices to be marked with a safety sign in accordance with the ANSI Z535 standards. Given that these standards made the older OSHA sign formats obsolete in 2002. These 4 high voltage warning stickers are a must for any electrical panel, distribution box, or equipment that poses a shock risk. They're bright, clear, and easy to see, reminding everyone to be cautious. The overlaminates work so well that we offer a lifetime guarantee. Add a protective barrier between your sign and the environment, and never worry about.
