

Denmark Customs Clearance Passive Optical Network SFP

Summary of Content

PON SFP modules imported into Denmark must comply with EU customs regulations, be classified under the appropriate HS code, and be declared electronically through Denmark's customs systems.

Classification and HS Codes

PON SFP modules are fiber optic transceivers used in telecommunications networks. For customs purposes, they are generally classified under HS Code 8517.62, which covers "Machines for the reception, conversion and transmission or regeneration of voice, image or other data, including switching and routing apparatus" (extended HTS code 8517.62.0090 may also apply) . Correct classification is essential because tariff rates and VAT are determined based on the HS code used .

Customs Procedures in Denmark

Denmark follows the Union Customs Code (UCC), which has been in effect since May 1, 2016, replacing the Community Customs Code . Key points for importers include:

- **Electronic Declarations:** All customs declarations must be submitted electronically through Denmark's customs system (DMS), replacing paper-based procedures .
- **Data Requirements:** Importers must provide detailed product information, including HS code, value, origin, and technical specifications.
- **Customs Duties and VAT:** Duties are calculated as a percentage of the declared value of the goods. VAT is also applied according to Danish rates .
