

Dimensions and parameters of relay protection spiral wound tube

Overview

Their dimensions are standardized by ASME B16. 20, which specifies the inner diameter, outer diameter, inner ring ID, outer (centering) ring OD, and thickness for each pipe size and pressure class. Inner ring inside diameters shown for 1 1/4" to 2 1/2" class 1500 and 2500 will produce inner ring. SpiralGuard is the Politubes range of spiral-wound insulating tubes, engineered to provide electrical insulation and mechanical protection in industrial equipment and electric motor applications. Manufactured by spirally winding a selection of high-performance insulating materials — including. Our MYLAR®/NOMEX® epoxy hoses not only provide the optimum means to waterproof and electrically insulate pipes but also are successful in other applications, such as when securing electromagnets to the engine. They are widely used in the electromechanical. We produce helically wound tubes as semi-finished product for the production of storage tanks or chemical appartous. Different wall thicknesses could be produced according to your demands. The Spiral wound membrane is formed by winding a flat sheet membrane, feed spacer.
