

Direct Sales of Secondary Distribution Boxes

Summary of Content

Direct sales of secondary distribution boxes involve manufacturers or brands selling directly to retailers or end customers, bypassing traditional distributor intermediaries to improve visibility, control, and profitability.

Understanding Secondary Distribution

Secondary distribution refers to the resale of products by distributors to retailers or end customers after the initial primary sale from the manufacturer to the distributor . In many industries, such as FMCG, electronics, and pharmaceuticals, this layer is critical for understanding real market demand and sell-through performance. While primary sales are fully visible to the manufacturer, secondary sales often occur outside the manufacturer's direct control, creating a "distribution blind spot" if not properly tracked .

Direct Sales in the Secondary Market

Direct sales of secondary distribution boxes mean that the manufacturer engages directly with the next tier of the supply chain, such as retailers or even end consumers, instead of relying solely on distributors. This can be achieved through:

- Direct-to-Retailer Sales: Supplying products directly to retail stores, bypassing some or all distributors.
- Direct-to-Consumer Channels: Selling through e-commerce platforms, company-owned stores, or subscription services.
