

Disable PoE on the switch

Summary of Content

You can disable PoE on a switch port using CLI commands like power inline never or via the switch's GUI PoE settings.

Disabling PoE via CLI (Command-Line Interface)

For Cisco switches, you can disable PoE on individual ports using the following steps:

- Access the switch CLI via console, SSH, or Telnet.
- Enter global configuration mode:

CodeCopyconfigure terminal

- Select the interface you want to disable PoE on (replace 1/27 with your port):

CodeCopyinterface gigabitEthernet1/27

- Disable PoE on that port:

CodeCopypower inline never

- To re-enable PoE later, use:

CodeCopypower inline auto

- Save the configuration to make it persistent:

CodeCopywrite memory

This method ensures that PoE is completely disabled on the selected port without shutting down the port itself .
