

Display cabinets must be CCC certified

Summary of Content

Display cabinets generally do not require CCC certification unless they include electrical components that fall under CCC-mandatory categories.

Understanding CCC Certification

The China Compulsory Certificate (CCC) is a mandatory safety and quality mark for certain products sold, imported, or used in China. It applies to products listed in the official CCC catalogue, which includes categories such as electrical appliances, automotive components, and certain industrial equipment . Products not listed in the catalogue can be sold without CCC certification .

Display Cabinets and CCC

- Standard display cabinets made of wood, glass, or metal without electrical components (like lighting or refrigeration) are typically not listed in the CCC catalogue. Therefore, they do not require CCC certification for sale or use in China .
- Display cabinets with electrical features, such as built-in lighting, refrigeration, or heating, may include components that fall under CCC-mandatory categories (e.g., electrical devices, circuit components). In such cases, the electrical parts may require CCC certification, even if the cabinet itself does not .

How to Verify CCC Requirements

- Check the CCC catalogue: The Certification and Accreditation Administration of China (CNCA) maintains an updated list of products requiring CCC certification .
