

Distribution Box dmb

Overview

The DMB Series is a multi-board plastic DIN rail enclosure that provides from 6 to 72 PCB terminals, depending on the model. Each fuse is designed to blow when the current exceeds a certain limit, thereby cutting off the power to prevent damage. Removable terminal guards have snap-off. Our flexible distribution boxes enable reliable, decentralised signal transmission and power transmission up to protection class IP67 – wherever passive distribution boxes are required. High-quality materials and robust product designs ensure a reliable connection, signal transmission and power. A distribution board (also known as a panelboard, circuit breaker panel or box, electric panel, fuse box or DB box) is a component of an electricity supply system that divides an electrical power feed into subsidiary circuits while providing a protective fuse or circuit breaker for each circuit in. A Distribution Box, commonly known as a DB Box, serves as the central point for safely distributing electrical power from a main supply to multiple downstream circuits. It houses protective devices such as circuit breakers or fuses, ensuring both equipment protection and user safety. In practical. DMB-4770 - Box Plastic, ABS/PC Blend Gray Cover Included 3. What Is The Purpose of A Din Rail?Is Din Rail A Standard Size?Do Din Rails Need to Be Grounded?Grounding is not a primary function of DIN rails; however, they can serve a grounding role when equipped with terminal blocks designed for that purpose. In such cases, the DIN rail can act as a busbar for grounding, ensuring that the electrical system remains safe and compliant with regulations.See more on budind weidmueller
