Circuit breaker wiring configurations are the planned paths from the incoming supply through the main isolator, busbars, branch breakers, neutral bar, and protective-earth bar. The correct path depends on the supply system, pole count, protective device, and local electrical rules. Use this guide. Live (L) Wire Connection: In a distribution box setup, the incoming live wire (also known as phase or hot wire, denoted as L or Line) connects to the line terminal of the circuit breaker.
