

Distribution box with double rows and 24 circuits

Summary of Content

A 24-circuit double-row distribution box provides organized, safe, and efficient power distribution for residential, commercial, or industrial installations.

Overview

A double-row distribution box with 24 circuits is designed to manage multiple electrical circuits in a compact and organized manner. These panels typically include circuit breakers (MCBs), residual current devices (RCCBs), and surge protection devices (SPDs) to ensure safety against overloads, short circuits, and electrical surges. They are suitable for low-voltage applications, generally below 1000 volts, and serve as the central hub for distributing electricity to various circuits in a building.

Key Features

- **Circuit Capacity:** 24 modules arranged in two rows, allowing for clear separation and easy access to individual circuits.
- **Protection Devices:** Many models include integrated MCBs, RCCBs, and surge protection to safeguard appliances and wiring.
- **Material and Construction:** Options include robust plastic housings (IP40 for indoor use) or halogen-free thermoplastics (IP65 for watertight applications), with transparent or hinged doors for easy inspection.
- **Installation Type:** Available in flush-mounted or surface-mounted designs, depending on space and aesthetic requirements.
