

# Distribution box wkh

## Summary of Content

WKH distribution boxes are modular power distribution terminal blocks designed for compact, safe, and flexible electrical connections in panels and machinery.

### Overview

WKH distribution boxes, also known as WKH power distribution terminal blocks, are used to distribute electrical power and establish connections between wires of different cross-sections. They are commonly applied in installation and distribution boards, mechanical controllers, and machinery control panels. These blocks allow for single or multiple pole configurations in a compact footprint, enabling high-density panel construction.

### Design and Features

- **Mounting Options:** WKH blocks can be snapped onto NS 35 DIN rails or screwed directly onto mounting plates using side flanges.
- **Safety:** Many models include hinged or removable covers to prevent accidental contact with energized connectors and reduce the risk of short circuits.
- **Compact and Efficient:** The design allows for smaller panels while maintaining high conductor density, saving installation space.
- **Electrical Capacity:** Depending on the model, WKH blocks can handle voltages up to 500V and currents up to 125A, with conductor sizes up to 35mm<sup>2</sup>.
- **Compliance:** Products are often CE marked, RoHS compliant, and tested for high conductivity and reliable electrical contact.
