

Does a 200Mbps fiber optic connection and a 100Mbps router have any impact

Overview

Even if your internet provider is sending you a blazing 200Mbps signal, if your router can only handle 100Mbps through its ports, that's the maximum speed you'll get. It's like having a super-fast highway leading to a narrow city street – traffic will inevitably slow down. As a baseline, 100 Mbps comfortably supports five to seven devices for everyday tasks. But a household running 15 or more connected devices, like smart home gear, security cameras, and a couple of 4K streams, needs at least 300-500 Mbps to avoid peak-hour congestion. The mistake most households. TP-Link router speed isn't one single number. Signal rate, link speed, and actual internet speed are distinct, and understanding the differences matters when troubleshooting or evaluating your connection. I have a fibre optic connection of 100Mbps (with Virgin Media) If I run this speed test, which suspiciously is the one recommended by my internet provider on their website, I always have a stable. The Archer C2 is a powerful hub to support a robust and extremely fast wired network. cavedog said: I got the Archer C2 today and using it on my Openserve 200Mbps line. This refers to the maximum rate at which data can pass over your internet connection.
