

Does it cost money to activate a fiber optic router

Summary of Content

Activating a fiber optic router for residential service often does not cost extra, though installation fees may apply depending on the provider and setup.

Residential Fiber Activation

For many residential fiber services, such as Google Fiber, the router and Fiber Jack are provided at no additional cost, and activation is included as part of the installation process. Customers can choose professional installation, where a technician sets up the Fiber Jack and router, or a self-setup option if eligible. The technician ensures the router is connected and the service is activated, performing diagnostic tests to confirm proper operation, all without extra charges for the equipment or activation itself .

Commercial or New Infrastructure Installations

In contrast, commercial fiber installations or locations requiring new infrastructure may involve additional costs. These can include fees for running new fiber lines, specialized equipment, or labor if existing lines cannot be used. Installation costs vary based on distance from the provider's network, building complexity, and whether underground or aerial fiber is required . Some providers may waive installation fees if existing infrastructure is available, but new builds generally increase costs.

Equipment Considerations
