

Does the monitoring box contain a fiber optic tray How is it installed

Summary of Content

Installing a fiber optic tray involves mounting the tray inside the enclosure, routing fibers carefully, splicing or connecting pigtails, and securing the tray cover for organized and reliable fiber management.

Step 1: Prepare the Enclosure and Tray

- Open the monitoring or termination box and identify the designated slots or mounting points for the fiber optic tray .
- Ensure the enclosure is clean and free of dust or debris.
- If stacking multiple trays, check the side latches or stacking mechanism to allow secure placement of additional trays .

Step 2: Route the Fiber Cables

- Pull the fiber optic cables into the enclosure through the cable entry points.
- Use cable grommets or ties to manage slack and prevent sharp bends, maintaining the minimum bend radius specified by the manufacturer .
- Route the pigtail fibers from the adapter panel to the tray, ensuring sufficient length for splicing or connection without tension .

Step 3: Install the Fiber Optic Tray

- Place the tray into the enclosure, aligning it with the mounting points or side latches.
