

Dual-circuit small distribution box

Summary of Content

A dual-circuit small distribution box allows independent control and protection of two electrical circuits, suitable for indoor or outdoor installations.

Overview

A dual-circuit distribution box is an enclosure designed to house and protect two separate electrical circuits. It can manage two groups of devices or luminaires independently, providing both on/off control and protection through circuit breakers or fuses. These boxes are compact, modular, and often compatible with DIN rail-mounted breakers, making them suitable for residential, commercial, or outdoor applications .

Key Features

- **Independent Circuit Control:** Each circuit can be controlled separately, allowing flexibility in managing lighting or other electrical loads .
- **Protection:** Equipped with circuit breakers or protective devices to prevent overloads and short circuits. Rated voltages typically reach 400V, with current ratings around 16A–75A depending on the model .
- **Construction:** Made from durable materials such as ABS or PC plastic, often flame-retardant, impact-resistant, and waterproof (IP65–IP67), suitable for harsh environments .
- **Installation:** Can be wall-mounted or integrated into utility poles for outdoor use. Many models feature snap-on brackets or DIN rail compatibility for easy installation and maintenance .
