

ESXi optical module not recognized

Overview

Reinstall the affected ESXi host with ESXi 7.0 U3, using the same build number as other cluster members to restore HBA functionality and datastore visibility. The affected vmnic will not appear under the Physical Adapters section in the vCenter or Host Client UI. 0 U3, HBA adapters are no longer visible, resulting in missing datastores. Observed. However, even in well-designed infrastructures, engineers frequently encounter issues such as SFP modules not being detected, no link light after installation, or unstable fiber connections. These problems can disrupt network performance and require systematic troubleshooting to resolve quickly. In short, this happens when ESXi does not have inbox drivers for your NIC and the vLCM Image configuration does not have the async NIC driver added. So how to install a new NIC driver if the hosts is not reachable over. No Bootable Device Found: This message indicates that the ESXi host's BIOS or UEFI firmware is unable to locate a device with a bootable ESXi installation.
