

Electric power distribution box

Overview

North American distribution boards are generally housed in enclosures, with the positioned in two columns operable from the front. Some panelboards are provided with a door covering the breaker switch handles, but all are constructed with a dead front; that is to say the front of the enclosure (whether it has a door or not) prevents the operator of the circuit breakers from contacting live electrical parts within. carry the current from incoming line (hot) conductors to the breakers.

Summary of Content

An electrical power distribution box safely distributes electricity from a main source to multiple circuits, protecting devices and users through circuit breakers or fuses.

Overview

An electrical power distribution box is a central hub that manages and distributes electrical power to various circuits within a building or temporary setup. It ensures that electricity is delivered safely and efficiently while protecting wiring and connected devices from overloads or short circuits . These boxes are essential in residential, commercial, industrial, and temporary applications.

Types of Power Distribution Boxes

1. Residential Breaker Boxes (Main Panels)

- Also called breaker panels or main breaker panels, these are installed in homes to distribute electricity to rooms and appliances .
- They house circuit breakers that automatically shut off power in case of overload or short circuit.
