

Electrical Distribution Box Parts

Summary of Content

An electrical distribution box contains essential components like circuit breakers, bus bars, neutral and ground bars, isolators, and enclosures to safely distribute and manage electricity.

Core Components

- **Main Breaker:** Acts as the primary disconnect switch for the entire electrical system, allowing complete shutdown during emergencies or maintenance .
- **Circuit Breakers:** Protect individual circuits from overloads and short circuits. Types include standard breakers, GFCI (Ground Fault Circuit Interrupters), AFCI (Arc Fault Circuit Interrupters), surge protection breakers, and miniature circuit breakers (MCBs), .
- **Bus Bars:** Conductive metal strips that distribute electricity from the main supply to individual breakers .
- **Neutral Bar:** Provides a return path for current to the power source, keeping neutral wires organized and separate from the ground .
- **Grounding Bus Bar:** Connects the system to the earth, safely dissipating fault currents to prevent shocks or fires .
- **Residual Current Devices (RCDs) / RCCBs:** Detect leakage currents and disconnect power to prevent electric shocks .
- **Isolators:** Manual switches that allow safe maintenance by isolating parts of the circuit .
