

Electrical complete set of construction site distribution box

Summary of Content

A complete construction site distribution box is a pre-wired or modular electrical assembly designed to safely distribute power on temporary or semi-permanent sites, compliant with IEC standards and built for durability and flexibility.

Overview

Construction site distribution boxes, also known as current distributors or ACS (Assemblies for Construction Sites), are designed to provide safe and reliable power distribution from the main feed to multiple consumers on a construction site. They are suitable for civil building sites, outdoor events, festivals, and temporary installations .

Key Features

- Pre-wired or modular design: Many systems come pre-wired for quick installation, while modular versions allow customization for specific site requirements .
- Materials: Housings are made from technopolymer, thermoplastic, fiberglass, or sheet steel, often with fire-resistant backrests and high impact resistance (IK08-IK10) for durability .
- Ingress protection: Typically rated IP65–IP67, ensuring protection against dust and water, suitable for outdoor and harsh environments .
- Safety and standards compliance: Designed according to IEC 61439, IEC 60364, and other relevant standards, including EMC, LVD, and RoHS compliance .
