

Empty three-level distribution box for construction site

Summary of Content

An empty three-level distribution box provides a flexible, safe, and modular solution for distributing power to tools, machinery, and temporary lighting on construction sites.

Overview

A three-level distribution box (tertiary distribution box) is designed to receive power from a main or secondary distribution box and distribute it to multiple circuits for construction site equipment. These boxes are typically empty, allowing for custom installation of circuit breakers, sockets, and terminal blocks according to site requirements ().

Key Features

- **Material:** Commonly made from steel, stainless steel, fiberglass, or polystyrene, offering durability and resistance to impact and weather ().
- **Protection Ratings:** IP66 or higher for dust and water protection; IK07 or higher for impact resistance ().
- **Mounting Options:** Can be surface-mounted or installed on supports; some models include pre-mounted 35 mm DIN rails for easy component installation ().
- **Capacity:** Designed to handle three-phase power with options for neutral lines; suitable for both single-phase and three-phase circuits ().
- **Customization:** Users can install industrial sockets, waterproof 5-hole sockets, AC30 sockets, or terminal blocks depending on equipment needs ().
