

Exterior finish of the distribution box

Summary of Content

Distribution boxes feature exterior finishes made from metal or plastic, often with protective coatings or UV-stabilized materials to ensure durability, weather resistance, and safety.

Common Materials

Metal Enclosures: Many industrial and commercial distribution boxes use steel or aluminum for the outer shell. These metals provide high mechanical strength, impact resistance, and long-term durability. To enhance corrosion resistance, metal boxes are often coated with thermosetting powder coatings or painted finishes, which protect against rust and environmental wear, making them suitable for both indoor and outdoor use . **Plastic Enclosures:** Residential or light commercial distribution boxes often use PVC, ABS, or polycarbonate plastics. These materials are lightweight, corrosion-resistant, and UV-stabilized, making them ideal for outdoor installations exposed to sunlight and moisture. Plastic finishes also allow for easier handling and installation while maintaining electrical safety .

Protective Features

- **Waterproofing and Dustproofing:** Many distribution boxes are designed to meet IP65-IP68 ratings, ensuring protection against dust, rain, and splashes. Sealed doors, compression gaskets, and reinforced edges help maintain the integrity of the enclosure in harsh environments .
- **UV Resistance:** Outdoor boxes often include UV-stabilized finishes to prevent degradation from prolonged sun exposure .
