

FTTR Fiber Optic Router Price

Summary of Content

FTTR fiber optic routers are generally more expensive than standard routers, with prices ranging from approximately \$100 to \$400 per unit depending on brand, features, and Wi-Fi generation.

Price Overview

FTTR (Fiber to the Room) routers, also known as optical network units (ONUs) or master/slave gateways, are specialized devices designed to extend fiber directly into each room, supporting Wi-Fi 6/7 and high-speed optical backbones. On platforms like AliExpress, FTTR routers are available for purchase individually, with prices typically starting around \$100 for basic models and reaching \$400 or more for advanced Wi-Fi 6/7 units with multiple slave units and higher throughput. Prices fluctuate based on promotions, shipping, and bundled accessories.

Factors Affecting Cost

- **Hardware Complexity:** FTTR routers integrate optical-to-electrical conversion, high-speed switching, and advanced Wi-Fi capabilities, making them more expensive than standard routers.
- **Installation Requirements:** Professional installation is often required due to precise fiber routing, splicing, and specialized tools, which adds to the overall cost.
- **Consumables:** Invisible or micro optical cables used in FTTR systems are more costly than standard Ethernet cables due to their bend-resistance and manufacturing standards.
