

Fiber Optic Cable Distribution Box and Splice Box

Summary of Content

Fiber optic distribution boxes and splice boxes are essential components for organizing, protecting, and connecting fiber optic cables in a network.

Fiber Optic Distribution Box

A fiber optic distribution box serves as a central point where incoming fiber optic cables are terminated and distributed to individual connections within a building or network. It is designed to organize multiple fiber connections, provide easy access for maintenance, and protect fibers from environmental damage. Distribution boxes often include adapters, patch panels, and modules to facilitate connections between the main fiber line and end-user equipment. They are commonly used in FTTH (Fiber to the Home) deployments and structured cabling systems. Key features include:

- Multiple ports for fiber termination and distribution
- Compatibility with different fiber types (single-mode or multi-mode)
- Protection against dust, moisture, and mechanical stress
- Options for wall-mounted, pole-mounted, or outdoor installations
