

Fiber Optic Cable SC Coupler

Summary of Content

An SC coupler is a device that connects and aligns SC fiber optic connectors, enabling efficient light transmission with minimal loss.

Overview

A fiber optic SC coupler (also called an adapter or mating sleeve) is used to connect two SC fiber optic connectors precisely, ensuring optimal light transmission and minimal signal loss. SC couplers are widely used in single-mode and multi-mode networks, including FTTX, data centers, and premise networks. They provide low insertion loss, high repeatability, and reliable mechanical performance.

Types of SC Couplers

- Simplex SC Coupler: Connects a single fiber to another single fiber, ideal for point-to-point connections.
- Duplex SC Coupler: Connects two fiber pairs, often used in bidirectional communication or duplex links.
- Quad SC Coupler: Connects four fiber pairs, suitable for high-density applications.
- Hybrid SC Coupler: Connects different connector types, such as LC to SC, enabling flexible network integration.
- Angle-Polished Coupler: Designed for low-loss, high-precision applications like DWDM systems.
