

Fiber Optic Cable Sequence Price

Summary of Content

Fiber optic cable prices in 2026 vary widely, ranging from \$0.05 to \$1.50 per meter for materials, with installation and project-specific factors potentially raising total costs significantly.

Current Market Trends

Fiber optic cable prices have surged globally since late 2025, driven by structural demand shifts such as AI data center expansion and military applications, alongside limited supply due to long production cycles for fiber preforms . Standard single-mode fiber (G.652D) has increased 45–80% since mid-2025, while bend-insensitive grades like G.657A1 now trade around \$22 per kilometer and G.657A2 around \$35 per kilometer . In China, prices stabilized by March 2026 after a rapid early-year surge, with most quotations remaining steady .

Factors Affecting Price

- **Fiber Type and Count:** Single-mode fiber is generally cheaper per meter than multimode fiber, but multimode is preferred for short-reach data center applications . Higher fiber counts (e.g., 24-core or 288-core) increase costs significantly.
- **Cable Construction:** Armored cables, loose tube, or tight-buffered designs add 20–50% to material costs, especially for outdoor or harsh environments .
- **Jacket Material and Environmental Rating:** Outdoor PE or UV-resistant jackets cost more than indoor PVC or LSZH jackets. Direct-buried or flame-retardant cables require additional testing and certification .
- **Volume and Lead Time:** Bulk orders reduce per-unit cost, but urgent or custom orders can increase prices.
