

Fiber Optic Cable Small Square Flange

Summary of Content

FC simplex fiber optic adapters with small square flanges provide precise, stable connections for single-mode and multi-mode fibers, featuring low insertion loss and secure mounting.

Overview

A fiber optic adapter with a small square flange is a device designed to connect two fiber optic cables or connectors, ensuring precise alignment and minimal signal loss. These adapters are commonly used in patch panels, fiber distribution frames, optical instruments, and telecom networks. The square flange allows for secure mounting and stable alignment in high-density setups, making them suitable for both field and laboratory applications .

Key Features

- **High-Precision Alignment:** Most adapters use a ceramic or zirconia sleeve to ensure minimal insertion loss and accurate fiber alignment .
- **Durable Construction:** Metal bodies, often zinc alloy or copper, provide robustness and corrosion resistance .
- **Square Flange Design:** Enables secure mounting in standard fiber panels and optical devices, preventing misalignment during installation .
- **Low Insertion Loss:** Typically ≤ 0.3 dB for single-mode fibers, ensuring efficient signal transmission .
- **High Return Loss:** Often ≥ 50 dB for single-mode applications, reducing back reflection .
