

Fiber Optic Front LC Interface

Overview

LC (Lucent Connector) is one of the most widely adopted fiber optic interfaces in the world today. Even as 400G/800G parallel-optics and MPO-based high-density solutions grow, LC remains essential for 10G/25G/50G/100G/200G/400G duplex. This guide provides a fully updated and industry-ready overview of LC fiber optics, explaining the origin and design of LC connectors, their key features, and the complete ecosystem of LC-based products used in modern networking. It is commonly referred to as the Lucent Connector. As a small-form-factor (SFF) interface, LC has become the default duplex connector in enterprise LANs, telco closets, and data-center topologies because it balances density, repeatability, and cost. This guide walks. As a specialist in modular fiber optic systems, Fiber Products offers optimized solutions specifically for front module data center applications that combine European quality standards with innovative technology.
