

Fiber optic access and router connection

Summary of Content

To connect a fiber optic internet connection to your router, you must use an Optical Network Terminal (ONT) to convert the fiber signal into Ethernet, then link it to your router's WAN port.

Key Components

- **Optical Network Terminal (ONT):** Provided by your ISP, the ONT converts incoming light signals from the fiber optic cable into electrical signals compatible with standard networking devices .
- **Fiber Optic Cable:** Typically a thin, flexible cable with SC/APC or SC/UPC connectors that carries data as light pulses .
- **Ethernet Cable:** Cat6 or Cat6a is recommended for high-speed data transfer between the ONT and router .
- **Router:** A fiber-ready router with a WAN or Internet port, ideally supporting Wi-Fi 5 (802.11ac) or Wi-Fi 6 (802.11ax) for optimal performance .

Step-by-Step Connection

- **Install the ONT:** Place the ONT near the fiber entry point in your home, typically on a wall or in a closet .
- **Connect the Fiber Cable:** Remove protective caps and carefully insert the fiber optic cable into the ONT's optical port until it clicks securely. Handle the fiber connector by its plastic housing to avoid damage .
- **Link ONT to Router:** Use an Ethernet cable to connect the ONT's LAN or GE1 port to the router's WAN/Internet port .
